RACHANA GARDAS

rachanapatel0406@gmail.com –Kansas City, MO – (913) 413-4506 –LinkedIn

Summary:

Data Engineer with 4+ years of experience designing ETL/ELT pipelines, building **analytics-ready datasets**, and developing **scalable data models using medallion architecture** on cloud platforms using Python and SQL.

Skills:

Computer Languages: Python, SQL, PySpark, Java, Scala, JavaScript
Databases: Snowflake, BigQuery, MySQL, T-SQL, PostgreSQL, MongoDB, Redshift, Data Warehousing, Big Data (Hadoop, Hive, HBase, Cassandra)
Software: Databricks, dbt, Apache Airflow, Kafka, VS Code, Git, Tableau, Power BI, SSIS, Talend, ETL/ELT Pipelines, Data Quality Validation, Data Analysis, AWS Services (S3, Glue, Lambda, EC2, Redshift, Athena, DynamoDB), Google Cloud Platform (BigQuery, Cloud Storage), Microsoft Azure (ADF, ADLS, Azure Databricks), Informatica

Work Experience:

Data Engineer – SOFTVEL LLC: July 2025 – Present

- **Built scalable lakehouse data pipelines and medallion architecture data models (bronze, silver, gold layers)** using Azure Data Factory, Databricks, and Snowflake to deliver trusted datasets for reporting and analytics.
- **Developed automated SQL (PostgreSQL) and Python transformations** to integrate data from APIs and structured sources into centralized data platforms.
- **Implemented data quality checks, validation frameworks, and automated testing** to ensure reliability and accuracy of datasets used for analytics and dashboards.
- **Monitored and optimized data pipelines**, improving data reliability **and reducing processing errors by 20%** while supporting business reporting needs.

Data Engineer Intern – INTERACTION24 LLC: Dec 2024 - July 2025

- Implemented **data transformation logic using SQL and Python**, converting raw datasets into structured formats for analytical consumption.
- Extracted data from sources such as **APIs, CSV, and external files**, and ingested it into **Snowflake** to support centralized reporting datasets.
- Improved query performance in **Snowflake** through query optimization and partitioning techniques, reducing processing time by **20%**.

Data Engineer- LTIMINDTREE: May 2020 – Aug 2023

- **Designed end-to-end ETL pipelines using Talend and Databricks**, processing large **sales, inventory, and operational datasets** to support Mondelez retail analytics and reporting.
- **Migrated datasets from AWS S3 to Google Cloud Storage and BigQuery**, enabling scalable cloud data warehousing and improving SQL-based analytics performance.
- **Built data pipelines supporting On-Shelf Availability (OSA) and Suggested Order Quantity (SOQ) analytics**, helping retail teams monitor product availability and optimize inventory planning.
- **Performed data validation, SQL testing, and production monitoring**, improving data accuracy and **reducing manual operational effort by 25%**.

Projects:

Twitter data analysis (Power BI)

- Collected Amazon Fashion dataset from Kaggle and imported it into Power BI Desktop. Cleaned the data by removing null values, duplicates, and unnecessary columns, then built interactive data visualization dashboards using filters, KPI cards, and relationships to perform data analysis on sales trends and customer metrics.

Songs listening analysis (AWS)

- Collected a song listening dataset from Kaggle and built an ELT pipeline using AWS S3 and Amazon Redshift. Staged raw data in Redshift and transformed it into dimensional tables to support analytics and reporting dashboards in Power BI.

Education:

Master of Science in Computer Science May 2025

University of Central Missouri- Warrensburg
